MALCOLM MCKINNEY

SOFTWARE ENGINEER

EXPERIENCE

Software Engineer II
September 2018 – Present | LINE (now LY Corp), Tokyo, Japan

- Technologies Used: Java, Bash, MySQL, Vue.js, Drone CI, Kubernetes, Docker, Ansible, Karate, Verda (OpenStack)
- Designed CMS for operators to merge auto-suggest tags in order to improve sticker and emoji recommendation algorithm
- Utilized a graph database to establish a link between similar authors of stickers, emojis, and themes
- Made improvements to an internal tool which combines config management, build, and deployment services
- Eliminated memory leaks and modified authorization and authentication framework using Spring AspectJ
- Created API to kill hanging project build and application deployment processes running remotely on Kubernetes

Software Engineer I
June 2016 - April 2018 | Amazon.com, Tokyo, Japan

- Technologies Used: Java, AWS, Dynamo DB, JavaScript, JBehave, Selenium, HTML/CSS
- Launched pharmaceutical service in which Class 1 over-the-counter medicines can be bought on the Japanese marketplace[1]
- Created mobile and desktop versions of medical questionnaire page with front and backend validation
- Developed website for Amazon Prime Pets, a service which Amazon Prime members can receive subscriptions, discounted items, and product recommendations for their household pets
